Booking policy

Version 1.0 | Effective November 1-30, 2026 | Fictional test content

1. Creating a reservation

Dates and hours

This mock release supports parking November 1-30, 2026. All times use Europe/Warsaw local time, UTC+01:00 during this period. Every facility opens daily 06:00-22:00. A reservation must begin and end on the same calendar day within these hours.

Duration and booking details

The minimum stay is one hour. Book whole hours with start and end times on the hour. Supply name, surname and vehicle registration plate, then choose the facility, space type and interval. Same-day bookings are permitted before their start time.

Confirmation

A reservation is confirmed after the booking service accepts the allocation and payment. Keep the reservation ID, assigned spot ID and entry QR code. A search result or an available-space flag alone is not a confirmation.

Booking policy

Version 1.0 | Effective November 1-30, 2026 | Fictional test content

2. Availability and changes

Checking an interval

A space can host several reservations on the same day if their time intervals do not overlap. A booking ending at 11:00 does not conflict with another starting at 11:00. Cancelled reservations do not block the space. An available indicator does not guarantee every hour of that day is free.

Changing a booking

Before the booked start time, request a new interval or facility through the booking service. A change is accepted only after availability and the revised price are confirmed. The original reservation remains valid until the change is accepted. Space upgrades require payment of the difference.

Extending a stay

Request an extension before the existing end time. Extensions must be whole hours, must not overlap another booking and must end by 22:00. If rejected, leave by the existing end time. Arriving late does not move the booked end time.

3. Statuses and November sample records

Reservation statuses

Confirmed means a non-cancelled reservation has not started. Active means its time interval includes the snapshot time. Completed means its end time has passed. Cancelled means the reservation was withdrawn and no longer holds the space. These sample statuses describe scheduling, not observed vehicle entry.

Dataset snapshot

The companion database is a fixed snapshot at November 9, 2026, 12:00 local time. Reservation start and end dates cover November 1-10 only. Daily transport-slot records cover November 1-30. The absence of reservations after November 10 is an intentional sample-data boundary.

Current availability

Each transport-slot row describes one spot on one date. Past dates are unavailable for new bookings. On November 9, spots with an active reservation at noon are marked unavailable. Future dates are marked available but callers must also check interval conflicts. The database does not refresh as the clock advances.
