# Electric vehicle charging

Version 1.0 | Effective November 1-30, 2026 | Fictional test content

## 1. Equipment and eligibility

### Charging spaces

Each Northgate facility has two electric spaces, numbered 007 and 008. Each space has an 11 kW Type 2 AC socket. Bring a compatible cable. DC rapid charging and adapters supplied by the operator are not available.

### Eligible vehicles

Electric spaces are for plug-in vehicles using the charger during their stay. Vehicles must fit the 5.0 m length, 2.0 m width and 2.0 m height limits and stay within 3,500 kg gross mass. A connector match does not override the size limits.

### Power expectations

Actual charging power depends on the vehicle, battery condition and site load. The advertised 11 kW is a maximum, not a guaranteed sustained output. No particular battery level at departure is promised.

## 2. Starting and ending a session

### Start procedure

Park in the assigned electric space, inspect the socket and cable for visible damage, and follow the charger's display prompts. Use the reservation reference when prompted. Keep the cable within the marked bay and out of pedestrian routes.

### Finish procedure

Stop charging using the display or vehicle control, unlock the connector and take your cable. Complete disconnection and exit before the parking reservation ends. Charging does not extend the parking interval.

### A charging fault

Stop using visibly damaged equipment and report the charger number, facility and reservation ID through the intercom. Do not dismantle a connector or reset electrical cabinets. Support can offer another compatible space only if one is available.

## 3. Prices and service interruptions

### Separate parking and energy charges

Parking uses the electric-space hourly rate: CTR PLN 10.00, RIV PLN 8.00, STA PLN 9.00, AIR PLN 7.00. Energy costs PLN 1.80 per kWh in addition. A two-hour CTR stay consuming 10 kWh costs PLN 20.00 parking plus PLN 18.00 energy.

### Equipment unavailable on arrival

Contact support before starting the stay if the reserved charger is unusable. Support may offer another electric space. If the customer accepts a standard space, use the standard parking rate and charge no energy. If no suitable replacement is accepted, refund the unused parking period.

### Availability information

A bookable electric parking space does not report a charger's live health. The November sample database contains no charger telemetry or energy measurements. Use support for operational faults; use the database for spot and reservation schedules.
